SUMMARY

Engineering leader for AI products. I lead the teams and architecture that turn AI capabilities into reliable production systems. At Elsevier I took LeapSpace from inception to production in under 6 months; it passed 1M active users within 10 months of launch. 20+ years writing software, 12+ years in Stockholm, Alexandria and Amsterdam, 7+ years leading teams.

15M+
researchers served yearly by Scopus AI and LeapSpace

1M+
LeapSpace active users within 10 months

$6.5M+
LeapSpace subscriptions in the first 10 months

135+
engineers led across teams

EXPERIENCE

Manager, Software Engineering & Solution Architect — **Aug 2025 - Present**
Elsevier - LeapSpace · Promoted from Software Engineering Lead in Jun 2026 — Amsterdam, NL

- Leading LeapSpace, a new AI platform for research discovery, since inception; took it to production in under 6 months.
- Built the team from zero: recruiting, team topology and engineering ways of working.
- Launched January 2026; $6.5M+ in subscriptions and 1M+ active users in the first 10 months.
- Own the technical strategy, architecture and team structure as the platform scales.
- Drove adoption of LangChain and LangGraph; mentored teams on AI/ML integration in production.

Principal Software Engineer — **Apr 2024 - Jul 2025**
Elsevier - Scopus and Scopus AI — Amsterdam, NL

- Led engineering and architecture for Scopus AI.
- Owned the language parsing capabilities of the Scopus Search Query Language.
- Migrated parsing to ANTLR, improving search efficiency and accuracy.
- Designed and built a pipeline to support ongoing enhancements and scalability of query processing.

Software Engineering Lead — **Sep 2022 - Mar 2024**
Elsevier - Engineering Village — Amsterdam, NL

- Accountable for Engineering Village ($40M+), a leading engineering information discovery platform.
- Managed 2 teams of 12+ engineers: hiring, onboarding, coaching and career growth.
- Moved the team from Dayton, Ohio to Amsterdam, saving about $500K per year.
- Migrated big data pipelines from on-premises to the cloud: more scalable, traceable and less error-prone.

Software Engineering Lead — **Sep 2020 - Aug 2022**
Elsevier - Scopus — Amsterdam, NL

- Managed a scrum team of 5+ engineers: hiring, onboarding, coaching and career growth.
- Cut legacy API response time from about 30 seconds to about 3.
- Rebuilt the author feedback wizard from JSP to React/Redux; NPS went up and releases moved from monthly to daily.
- Designed a data-driven author profile curation system and delivered a proof of concept.

Software Development Team Lead — **Jan 2019 - Aug 2020**
Zoover Media B.V. — Amsterdam, NL

- Led a team of 4-6 engineers replacing a 15+ year old black-box system.
- Cut average page load from 9 seconds to 3.
- Built an internal headless CMS, saving about 50 hours of manual data entry per batch.
- Redesigned the ElasticSearch cluster architecture; data sync became 5x faster.

Full Stack Software Engineer — **Jun 2018 - Dec 2018**
Zoover Media B.V. — Amsterdam, NL

- Built features for zoover.nl in React, Redux and Node.js, plus SEO improvements and analytics integration.

Full Stack Web Developer **Jul 2015 - Mar 2018**

DoReMIR Music Research AB Stockholm, SE

- Designed a serverless audio analysis backend on AWS Lambda, API Gateway, DynamoDB and S3.
- Built REST APIs and features for the ScoreCloud backend in Node.js and PostgreSQL.

Earlier roles **2004 - 2015**

Globalmouth (Stockholm), Madar Soft (Alexandria), freelance clients

- Frontend and hybrid mobile apps (AngularJS, Cordova), payment API integrations, web, embedded and desktop projects.

SKILLS

Leadership: Team building, distributed and cross-functional teams, mentoring, technical strategy, engineering culture

Architecture: Microservices, DDD, event-driven systems (Kafka, RabbitMQ), cloud-native, security-first design

AI/ML: LangChain, LangGraph, LangFlow, production AI systems

Backend: Java, Spring Boot, Node.js, TypeScript, Python · **Frontend:** React, Redux, JavaScript, HTML/CSS

Data: PostgreSQL, MongoDB, Elasticsearch, Redis, DynamoDB, OracleDB

Cloud & DevOps: AWS, GCP, Kubernetes, Docker, Jenkins, GitHub Actions · **Observability:** New Relic, Grafana, Prometheus, Kibana

EDUCATION

B.E. Electrical, Electronics and Communications Engineering
Alexandria University, Faculty of Engineering

LANGUAGES & COMMUNITY

Arabic (native), English (fluent), Dutch (learning)
Writes on AI systems and architecture on Medium; volunteer tech mentor
